

EARTHQUAKE!!!

8.0 For 3??

ARE YOU PREPARED??

Recently I attended a community earthquake preparedness meeting. The message was clear, it's not if but when the big one hits, are we prepared?

In the meeting I attended it was stated that we could possibly experience an 8.0 quake that could last up to three minutes! Northridge earthquake was a 6.7 and lasted 15 seconds!

With the recent natural disasters that have hit Texas, Florida, Puerto Rico and Mexico it's become more likely that we will be on our own for sometime before aid and help could reach us.

The takeaways from the meeting are:

Have a plan with your family: what to do, where to meet and who to contact in the event of a disaster.

Take preemptive measures to give yourself the best possible chance to handle a disaster and its aftermath.

Prepare emergency supply kits for your home, work and vehicle.

To help you prepare we've included an earthquake preparedness action list provided by one of our insurance partners and a preparedness kit checklist offered by FEMA.

It's never too soon to be ready as life changes with the tick of the clock.
